AI for Office Automation

DAY 2 — TASKS WORKBOOK

Session Duration: 4 Hours | 12 Tasks | Individual & Pair Exercises

Participant Information			
Name:	Rahaf Alkiyumi	Date:	13/4/2026
Job Title:		Department:	

Session Schedule

Time	Section	Tasks	Focus
0:00 – 0:50	A — Workflow Design	Tasks 1–2	AI workflow thinking + IPO design
0:50 – 1:40	B — Prompt Engineering	Tasks 3–5	Role-based prompts + structured outputs + constraints
1:40 – 2:40	C — Communication	Tasks 6–8	Email chains, executive memos, meeting minutes, tone
2:40 – 3:40	D — Reports & Documentation	Tasks 9–11	Multi-doc analysis, executive summaries, SOPs, slides
3:40 – 4:00	E — Workflow Planning	Task 12	Personal AI workflow plan for Day 2 topics

■ Blue tasks = General business ■■■ Purple tasks = Developer-specific ■ Teal tasks = Mixed / choose your path

SECTION A AI Workflow Design — Input → Process → Output

TASK 1 Design an AI Workflow from Scratch

■ 25 min
● Beginner

■ Instructions

1. Choose ONE recurring task from your daily work (or use the example below).
2. Fill in the IPO Workflow Design table below.
3. Write a CRTFC prompt for the AI Process step.
4. Test the prompt and evaluate the output.
5. Identify what you would add to improve the workflow.

Example Task (or choose your own):

You receive raw bullet-point notes after every client call. Currently you spend 20–30 minutes writing these up into a structured call summary for your CRM and manager. Design an AI workflow to automate this.

Step 1 — IPO Workflow Design Table

Step	Your Workflow Design	Questions to Answer
INPUT	Raw bullet-point notes from client calls (unstructured text, short phrases, incomplete sentences)	What raw material do you start with? What format is
PROCESS	Use ChatGPT with a single-turn CRTFC structured prompt to convert notes into a clear, organized summary.	What AI tool? What prompt strategy? Single or mult
OUTPUT	Structured call summary with sections: Summary, Key Points, Action Items, Next Steps Shared with manager and CRM system for tracking decisions and follow-ups.	What exact format? Who receives it? What decision
REVIEW	Reviewed by project manager or user (you) Check for: Accuracy, Missing details, Clarity Time: 2–3 minutes	Who reviews? What do they check? How long shou

Step 2 — Write Your CRTFC Prompt for the Process Step

Element	Question	Your Answer
Context	What is the situation? Who are you?	You receive raw notes after client calls that need to be structured for reporting.
Role	Who should AI act as?	Act as a professional project manager.
Task	What exactly do you want?	Convert raw notes into a structured and clear summary.
Format	How should the output look?	Sections: Summary, Key Points, Action, Items, Next Steps
Constraints	Any limits, tone, exclusions?	Max 150 words, No assumptions or added information, Clear and professional tone

Step 3 — Paste Your Combined Prompt Here (write it out in full):

Act as a professional project manager. You are given raw bullet-point notes from a client call. Convert these notes into a structured and concise summary using the following sections: Summary, Key Points, Action Items, and Next Steps. Ensure the tone is clear and professional. Do not add any information that is not explicitly provided in the notes. Keep the response within a maximum of 150 words and focus only on the most important details.

Step 4 — Test it and rate the output: ■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

Step 5 — What would you add or change to improve this workflow?

Add structured input templates, automatic tagging (priority/deadlines), and an AI validation step to catch missing information and improve accuracy.

TASK 2 Identify Your Top 5 Automation Opportunities

■ 25 min
● Beginner

■ Instructions

1. List your 5 most repetitive or time-consuming writing/communication tasks.
2. For each task, estimate the time it currently takes and the time AI could save.
3. Score each task on automability (1=hard to automate, 5=easy to automate).
4. Circle your top 3 tasks — these become your personal workflow priorities.
5. Share your top choice with the group and explain why.

My Top 5 Repetitive Tasks — Automation Opportunity Audit

Task Description	Current Time	AI Time Saved	Automability (1–5)	Priority?
Writing professional emails	20 min	15 min	■■■■■	■ Yes ■ No
Code review (bugs & security)	40 min	25 min	■■■■■	■ Yes ■ No
Debugging backend issues	45 min	30 min	■■■■■	■ Yes ■ No
Writing PR descriptions	15 min	10 min	■■■■■	■ Yes ■ No
Meeting notes → summaries	25 min	20 min	■■■■■	■ Yes ■ No

My top automation opportunity (explain why it was chosen and what the ideal output looks like):

Code review
Debugging
Meeting summaries

Why I chose it:
It takes the most time and requires deep focus. AI can quickly identify common issues, edge cases, and potential vulnerabilities, helping me review code faster and more consistently.
Ideal output looks like: 1-List of issues grouped by severity (High / Medium / Low) 2- Clear explanation of each issue 3- Suggested fixes 4- Improved version of the code

What context would AI need that it doesn't currently have?

- Project type (e.g., FinTech backend system)
- Programming language and framework
- Coding standards (PEP8, security rules)
- Business logic constraints (e.g., payment validation rules)
- Expected input/output behavior of the function

SECTION B Advanced Prompt Engineering — Roles, Outputs & Constraints

TASK 3 Role Upgrade — Rewrite 4 Weak Roles

■ 20 min
● Beginner

■ Instructions

1. Each row below has a weak role assignment.
2. Rewrite each as a strong role (include seniority, domain, and audience).
3. Test one strong role and compare its output quality against the weak version.
4. Note: which dimension (seniority / domain / audience) made the biggest difference?

#	Weak Role (Do Not Use)	Your Strong Role Rewrite	What You Added
1	You are a writer.	Act as a senior technical writer creating clear software documentation for developers and stakeholders.	Seniority + domain (technical writing) + audience (developers/ stakeholders)
2	You are a developer.	Act as a senior backend engineer specializing in Python APIs and secure, scalable systems for production environments.	Seniority + domain (backend/ Python/security)
3	You are an expert.	Act as a software architecture expert advising a CTO on system design decisions for high-scale applications.	Domain (architecture) + audience (CTO)
4	You are helpful.	Act as a customer support specialist for a SaaS platform, providing clear and friendly solutions to users.	Domain (customer support) + audience (users)

Which dimension (seniority / domain / audience) had the biggest impact on output quality? Why?

Domain had the biggest impact because it makes the response more specific and relevant. When the AI understands the exact field (e.g., backend, technical writing, architecture), it produces more accurate and useful outputs.

Rate the difference between weak and strong role output: ■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

TASK 4 Build a Structured Output Prompt

■ 20 min

● Intermediate

■ Instructions

1. Choose one of the three scenario options below.
2. Complete the full CRTFC table for your chosen scenario.
3. Write the combined prompt with a structured output specification.
4. Test the prompt. Evaluate whether the output exactly matches your specification.
5. Write one follow-up turn to refine the output.

Choose Your Scenario:

■ Scenario A

Write a weekly team status report as a structured Markdown table with sections: Completed / In Progress / Blockers / Next Week.

■■■ Scenario B

Generate a code review report for a Python function, formatted as numbered issues each with Severity (H/M/L), Description, and Suggested Fix.

■ Scenario C

Create a multi-document comparison table analyzing two different approaches to a problem of your choice (one row per criterion).

I chose Scenario: B

Element	Question	Your Answer
Context	What is the situation? Who are you?	I am a backend developer working on a Python-based system where code quality, correctness, and security are critical.
Role	Who should AI act as?	Act as a senior backend engineer and security-focused code reviewer.
Task	What exactly do you want?	Analyze the given Python function and generate a detailed code review report identifying issues, risks, and improvements.
Format	How should the output look?	Numbered list of issues. Each issue must include: Severity (High/ Medium/Low), Description, and Suggested Fix.
Constraints	Any limits, tone, exclusions?	Do not assume missing context. Focus on correctness, edge cases, performance, and security. Keep explanations concise and actionable.

My Structured Output Specification (describe exactly what format you want):

Format Type	■ Table ■ Numbered List ■ JSON ■ Paragraphs ■ Slide Outline ■ YAML ■ Other: _____
Exact Columns / Keys / Sections	• Severity: (High / Medium / Low) • Description: Clear explanation of the issue • Suggested Fix: Practical solution or code improvement
Length / Quantity Constraint	• Minimum 3 issues • Maximum 8 issues • Each issue ≤ 3–4 lines

My Combined Prompt (CRTFC + Output Specification):

Act as a senior backend engineer and security-focused code reviewer. You are given a Python function from a production system. Analyze the code and generate a structured code review report. Output a numbered list of issues, where each issue includes: Severity (High/Medium/Low), Description, and Suggested Fix. Focus on correctness, edge cases, performance, and security risks. Do not assume missing context. Keep each issue concise (maximum 3–4 lines) and provide between 3 and 8 issues.

My Follow-Up Turn (to refine the output):

Add an improved version of the Python function with all suggested fixes applied, and include inline comments explaining the changes.

Rate how closely the output matched your specification: ■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

TASK 5 Constraint Engineering Practice

■ 20 min

● **Advanced**

■ Instructions

1. Read each weak prompt below — identify which constraints are missing.
2. Rewrite with at least 3 explicit constraints added.
3. Test the rewritten version and evaluate the improvement.
4. BONUS: add a constraint that forces the AI to flag uncertainty.

Prompt 1 — Weak (Do Not Use As-Is)

```
Summarize this meeting.
```

- No length limit
- No format specified
- No focus (decisions, actions, etc.)
- No instruction to avoid assumptions

Summarize the meeting into 5 bullet points (max 15 words each) focusing on decisions, actions, and blockers. Do not add new information. Flag any unclear points.

Missing constraints: _____ Rewritten prompt:

Prompt 2 — Weak (Do Not Use As-Is)

```
Write a report about our Q3 performance.
```

- No structure
- No length limit
- No required metrics
- No audience or tone defined

Write a Q3 performance report with sections: Overview, Metrics, Achievements, Challenges, Recommendations. Keep it under 200 words and use a professional tone. Do not assume missing data.

Missing constraints: _____ Rewritten prompt:

Prompt 3 ■■■ — Weak (Do Not Use As-Is)

```
Review this code and fix any issues.
```

- No output format
- No focus (security, performance, etc.)
- No explanation requirement
- No limit on response
- No uncertainty handling

Act as a senior backend engineer. Review the code and list 3–8 issues with Severity, Description, and Fix. Include a corrected version. Flag any uncertainties.

Missing constraints: _____ Rewritten prompt:

Which constraint type had the biggest impact on output quality?

■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

SECTION C AI for Professional Communication

TASK 6 Email Chain — Draft a Professional Reply

■ 25 min
● Intermediate

■ Instructions

1. Read the email thread scenario below.
2. Complete the CRTFC table for your reply strategy.
3. Write and test your prompt. Evaluate the result.
4. Ask AI to produce two alternative tone versions (formal and direct).
5. BONUS: paste a real email thread from your own work (anonymize first).

Email Thread Scenario:

THREAD: Project Timeline Delay

From: Sarah (Client) — *"We were expecting the first deliverable by end of this week. Our team has scheduled a board presentation based on this. Can you confirm it is still on track?"*

From: Ahmed (Your Manager, internal) — *"There is a 5-day delay due to a dependency on the data team. We haven't told the client yet. You need to communicate this professionally."*

Your task: Draft a professional reply to Sarah acknowledging the delay, providing a revised date, and offering to reschedule her board presentation if needed.

Element	Question	Your Answer
Context	What is the situation? Who are you?	Operations/Project Manager
Role	Who should AI act as?	Act as a professional project manager handling client communication.
Task	What exactly do you want?	Write email reply to client about 5-day delay
Format	How should the output look?	Email format with subject, greeting, body, and closing.
Constraints	Any limits, tone, exclusions?	Professional, polite, clear, under 150 words, no blaming internal teams, include revised date and solution.

My Full Email Prompt:

Act as a professional project manager. Write a client email explaining a 5-day delay in delivering the first project milestone due to internal dependencies. Include a revised delivery date, acknowledge the inconvenience, and offer to support rescheduling the client's board presentation if needed. Keep the tone professional and polite, do not blame internal teams, and keep the email under 150 words.

AI Generated Email (paste result or take notes):

Rate the email quality: ■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

What changes did you make before you would send this email?

- Added exact new delivery date
- Slightly personalized tone (optional: “appreciate your patience”)
- Confirmed company signature format

Dear Sarah,

Thank you for your message. I wanted to inform you that due to a dependency currently being finalized, there will be a slight delay in delivering the first milestone. The updated delivery date is now [insert new date].

I understand the importance of your upcoming board presentation and sincerely apologize for any inconvenience this may cause. If helpful, we would be happy to support rescheduling or provide interim updates to assist your preparation.

Please let me know how you would like to proceed.

Kind regards,
[Your Name]

TASK 7 Write an Executive Memo Using AI

■ 25 min
● Intermediate

■ Instructions

1. Choose one of the two memo scenarios below.
2. Use the Executive Memo Template structure from the Explanation Guide.
3. Write your CRTFC prompt and test it.
4. Verify: does the AI lead with recommendation or build up to it?
5. If it builds up to it, add a constraint and re-test.

■ Memo Scenario A

Your IT department wants to migrate from on-premise servers to cloud. Write an executive memo to the CEO recommending approval. Budget impact: 15% cost reduction. Timeline: 6 months. Risk: 2-week migration window.

■■■ Memo Scenario B

Your engineering team wants to adopt TypeScript for all new services (currently JavaScript). Write an executive memo to the CTO recommending approval. Benefits: type safety, fewer runtime errors. Timeline: 3-month migration. Risk: team upskilling.

I chose Scenario: B

Element	Question	Your Answer
Context	What is the situation? Who are you?	I am part of the engineering team proposing adoption of TypeScript for new services to improve code quality and reliability.
Role	Who should AI act as?	Act as a senior engineering manager communicating with the CTO.
Task	What exactly do you want?	Write an executive memo recommending adoption of TypeScript.
Format	How should the output look?	Executive memo with header (To/From/Date/Subject), recommendation first, rationale bullets, and next steps table.
Constraints	Any limits, tone, exclusions?	Lead with recommendation, under 300 words, 3–4 rationale bullets, include risks, simple language (no heavy jargon).

Quality Checklist — Verify Your Executive Memo

- ■ Leads with RECOMMENDATION (not situation)
- ■ TO / FROM / DATE / SUBJECT header present
- ■ RATIONALE has 3–4 bullet points
- ■ NEXT STEPS table has Action / Owner / Deadline
- ■ Under 300 words
- ■ No jargon (or appropriate for audience)

Rate the executive memo quality: ■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

TASK 8 Meeting Minutes + Tone Adaptation

■ 20 min
● Intermediate

■ Instructions

1. Use the raw meeting notes below to generate structured meeting minutes.

2. Use the Meeting Minutes Template from the Explanation Guide.

3. Then take your minutes output and adapt it for TWO different audiences.

4. Compare how differently the same information reads in each version.

Raw Meeting Notes — Sprint Planning Session:

Date: Monday. Attendees: Ali (PM), Reem (Dev Lead), Omar (Backend), Fatima (QA), Nour (Design).
Discussed Q4 sprint goals. Ali says we need to ship the payment module by end of month — hard deadline from client.
Omar said backend API is 70% done but auth integration has a blocker — waiting for the security team to sign off on OAuth config. Estimated 3 days delay if not resolved by Wednesday.
Fatima raised concern: QA hasn't been involved early enough. Bugs found late. Suggested QA joins sprint planning from now on. Everyone agreed.
Nour showed updated UI mockups. Approved. Minor change requested to the checkout flow — needs one more revision.
Decisions: Ship payment module Nov 30. QA joins sprint planning. Omar to escalate OAuth issue to security team today.
Next meeting: Wednesday standup to check on OAuth blocker.

My Meeting Minutes Prompt:

Act as a professional project manager. Convert the following meeting notes into structured meeting minutes using sections: Date, Attendees, Summary, Key Decisions, Action Items, and Next Steps. Keep the output clear, concise, and factual. Do not add any information not provided. Highlight decisions and actions clearly.

Minutes Result (key sections — Actions & Decisions):

Key Decisions
- Payment module to be delivered by November 30 (hard deadline)
- QA team will join sprint planning going forward
- UI mockups approved with minor checkout revision required

Action Items
- Omar: Escalate OAuth issue to security team → Today
- Security Team: Approve OAuth configuration → Before Wednesday
- Nour: Revise checkout flow UI → Next iteration
- Team: Include QA earlier in sprint planning → Ongoing

Tone Adaptation — Rewrite for Two Audiences:

Audience 1: CEO (non-technical, 100-word summary)	Audience 2: Engineering Team (technical, action-focused)
Prompt instruction: Output notes:	Prompt instruction: Output notes:

Which audience version required more editing? Why?	■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

Prompt instruction:

Rewrite the meeting minutes into a 100-word, non-technical summary for a CEO. Focus on business impact, deadlines, and risks. Avoid technical jargon.

Output:

The team reviewed Q4 sprint progress with a focus on delivering the payment module by November 30, a key client deadline. Development is progressing well, though a dependency may cause a short delay if not resolved quickly. The team has taken steps to improve quality by involving QA earlier in the process. Updated designs were approved with minor adjustments required. A follow-up meeting is scheduled to ensure blockers are resolved and timelines remain on track.

Prompt instruction:

Rewrite the meeting minutes for an engineering audience. Focus on technical details, blockers, and clear action items.

Output:

- Payment module deadline: Nov 30 (fixed)
- Backend API ~70% complete; OAuth integration blocked pending security approval
- Risk: ~3-day delay if not resolved by Wednesday
- QA to join sprint planning to reduce late-stage bugs
- UI mockups approved; checkout flow needs revision

Actions:

- Omar → escalate OAuth issue today
- Security → approve OAuth config before Wednesday
- Nour → update checkout flow

SECTION D AI for Reports & Documentation

TASK 9 Multi-Document Analysis

■ 25 min
● Intermediate

■ Instructions

1. Read the two mini-documents provided below.
2. Write a prompt to synthesize both into a consolidated analysis.
3. Request: Executive Summary + Key Themes Table + Top 3 Insights with citations.
4. Evaluate: did AI correctly cite which document each insight came from?
5. BONUS: add a third document from your own work.

Document 1 — Q3 Customer Feedback Survey Summary:

Total responses: 87. Overall satisfaction: 3.6/5.
Top positive themes: fast onboarding (mentioned 34 times), responsive support team (28 times), clean interface (22 times).
Top negative themes: slow report generation (41 times), missing bulk export feature (38 times), mobile app crashes (27 times).
NPS score: +12. Most common suggestion: 'Make the dashboard load faster — it takes 8-10 seconds on average.'

Document 2 — Q3 Engineering Performance Report:

Sprint velocity: average 42 story points (target was 50). 3 out of 4 sprints delivered on time.
Key achievements: launched payment integration (2 weeks early), completed security audit with 0 critical findings.
Ongoing issues: report generation module is under-resourced — 1 engineer, 3 open bugs, last updated 4 months ago.
Tech debt: mobile codebase flagged as 'high risk' — last major refactor was 18 months ago.
Team highlight: QA integration into sprint planning (new process) — reduced late-stage bug discovery by 30%.

My Multi-Document Analysis Prompt:

Act as a business analyst. Analyze the two documents provided and produce a consolidated analysis.

Output must include:

1. Executive Summary (max 120 words)
2. Key Themes Table with columns: Theme | Evidence | Source (Document 1 or 2)
3. Top 3 Insights, each with a clear explanation and explicit citation of the source document

Constraints:

- Do not assume missing information
- Clearly label all sources (Document 1 or Document 2)
- Highlight any connections or conflicts between documents
- Keep the output structured and concise

Results Evaluation:

Check	Did AI do this?	Notes
Produced an Executive Summary	■ Yes ■ No ■ Partially	Clear and concise summary combining both docs
Created a Key Themes table	■ Yes ■ No ■ Partially	Themes aligned with feedback + engineering issues
Cited sources for each insight	■ Yes ■ No ■ Partially	Each insight clearly labeled (Doc 1 / Doc 2)
Flagged any conflicts between docs	■ Yes ■ No ■ N/A	Identified mismatch between user complaints and engineering resourcing
Stayed within requested format	■ Yes ■ No ■ Partially	Followed structure exactly

What prompt change would improve the citation or theme detection?

For every theme and insight, include at least one direct data point or metric from the source document.
Why:
This forces more precise linking between insights and actual evidence, improving accuracy and traceability.

TASK 10 Write an Executive Summary

■ 25 min
● Intermediate

■ Instructions

1. Use the combined content from Task 9 (both documents) as your source.
2. Write a prompt for an executive summary using the strict structure from the Explanation Guide.
3. Test with a 200-word limit, then a 100-word limit — compare the two results.
4. Verify: does the recommendation appear first?
5. Check: did AI add any information NOT in the source documents?

Element	Question	Your Answer
Context	What is the situation? Who are you?	I am analyzing Q3 customer feedback and engineering performance reports to inform leadership decisions.
Role	Who should AI act as?	Act as a senior business analyst writing for executive leadership.
Task	What exactly do you want?	Write an executive summary of the Q3 customer + engineering documents
Format	How should the output look?	Executive summary paragraph with recommendation first, followed by key insights.
Constraints	Any limits, tone, exclusions?	Max [200 / 100] words. No new information. Recommendation first.

My Executive Summary Prompt (200-word version):

Act as a senior business analyst. Write an executive summary of the combined Q3 customer feedback and engineering performance reports. Begin with a clear recommendation. Summarize key insights, including customer satisfaction, major issues, and engineering performance. Keep the summary under 200 words, use clear executive language, and do not add any information not present in the source documents.

Side-by-Side Comparison:

200-Word Version — Key Differences	100-Word Version — Key Differences
• Most useful section: Clear connection between customer complaints and engineering gaps • More detailed explanation of issues (performance, mobile, resourcing) • Better context for decision-making Recommendation appeared: ■ First ■ Last Extra info added: ■ Yes ■ No Most useful section:	• Most useful section: Quick summary of main risks and actions • More concise but less detailed • Focused only on highest-impact insights Recommendation appeared: ■ First ■ Last Extra info added: ■ Yes ■ No Most useful section:

Which word limit produced the more useful executive summary? Why?

The 200-word version was more useful because it provided enough detail to clearly connect customer feedback with engineering challenges, enabling better decision-making while still remaining concise.

TASK 11 Convert a Report into a Presentation Outline

■ 25 min
● Advanced

■ Instructions

1. Use the combined Q3 findings (Tasks 9–10) as your source report.
2. Write a prompt to convert it into an 8-slide presentation outline.
3. Specify: audience, goal, flow, and max 30 words per slide.
4. Evaluate: does the flow follow Hook → Context → Problem → Solution → CTA?
5. BONUS: ask AI to write speaker notes for slides 3 and 5.

Element	Question	Your Answer
Context	What is the situation? Who are you?	I am presenting Q3 customer feedback and engineering performance insights to leadership.
Role	Who should AI act as?	Presentation strategist and executive communications expert
Task	What exactly do you want?	Convert Q3 report into 8-slide presentation outline
Format	How should the output look?	Slide titles + bullet points (max 30 words per slide) + speaker notes for slides 3 and 5.
Constraints	Any limits, tone, exclusions?	Max 30 words per slide. Flow: Hook → Context → Problem → Solution → CTA

My Report-to-Presentation Prompt:

Act as a presentation strategist. Convert the Q3 customer feedback and engineering report into an 8-slide presentation outline for senior leadership. Each slide must include a title and bullet points (maximum 30 words). Follow this flow: Hook, Context, Problem, Problem, Solution, Solution, Evidence, CTA. Use clear, concise, executive-friendly language. Add speaker notes only for slides 3 and 5. Do not exceed word limits.

Slide Outline Evaluation:

Slide	AI-Generated Title	Under 30 words?	Flow Stage	Speaker Note?
1	Q3 Performance Snapshot	■ Yes ■ No	Hook	■ Yes ■ No
2	Q3 Overview & Metrics	■ Yes ■ No	Context	■ Yes ■ No
3	Customer Pain Points	■ Yes ■ No	Problem	■ Yes ■ No
4	Engineering Gaps & Risks	■ Yes ■ No	Problem	■ Yes ■ No
5	Key Improvement Strategy	■ Yes ■ No	Solution	■ Yes ■ No
6	Execution Plan & Priorities	■ Yes ■ No	Solution	■ Yes ■ No
7	Supporting Data & Evidence	■ Yes ■ No	Evidence	■ Yes ■ No
8	Next Steps & Call to Action	■ Yes ■ No	CTA	■ Yes ■ No

Rate the presentation outline quality: ■ 1 — Poor ■ 2 — Fair ■ 3 — Good ■ 4 — Very Good ■ 5 — Excellent

Which slide needed the most editing? What was missing?

Slide 7 (Evidence) needed the most editing because it lacked specific metrics and clear linkage to insights. Adding concrete data (e.g., NPS score, bug counts, performance gaps) made it stronger and more credible.

SECTION E Personal AI Workflow Plan — Day 2 Topics

TASK 12 Build Your Day 2 Personal AI Workflow Plan

■ 20 min
● Advanced

■ Instructions

1. Review the automation opportunities you identified in Task 2.
2. Map your top 5 tasks to Day 2 AI skills (workflow, communication, documentation).
3. For each task, identify the template you will use and estimate the time savings.
4. Choose your top 3 — these are your implementation priorities.
5. Prepare a 60-second pitch: 'I will use AI to automate [task] using [method], saving [time].'

My Day 2 AI Workflow Plan

Task / Deliverable	AI Skill (from Day 2)	Template to Use	Time Saved	Top 3?
Client status emails	Communication	Email CRTFC Template	2-3 hrs /week	■ yes
Meeting minutes & summaries	Documentation	Meeting Minutes Template	2 hrs / week	■ yes
Code review reports	Dev workflow	Code Review Template	3-4 hrs /week	■ yes
Executive memos	Communication	Email CRTFC Template	1-2 hrs week	■ No
Report → presentation slides	workflow/Docs	Presentation Outline Template	2 hrs / week	■ NO
				■

My 60-Second Pitch (write it out — you will present this to the group):

I will use AI to automate code review reports using a structured prompt template where the AI identifies issues, assigns severity, and suggests fixes. This will standardize reviews, improve code quality, and save approximately 3 to 4 hours per week. It also allows me to focus more on complex logic instead of repetitive review tasks.

Day 2 Final Reflection

Q1: Which communication or documentation task will save me the most time with AI?

Meeting minutes and summaries, because they are repetitive and easy to standardize.

Q2: What was the most surprising result from testing prompts today?

How much better the output becomes when using clear constraints and structured formats.

Q3: Which prompt technique (role, structured output, constraint, multi-turn) was hardest to master?

Constraint writing — especially defining exact limits without overcomplicating the prompt.

Q4: What is the first AI workflow I will implement in my real work this week?

Automating code review reports using a structured prompt template.

Q5: What question do I still have about AI for professional communication or documentation?

How to best integrate AI outputs into team workflows without affecting consistency and approval processes.

■ Day 3 Preview — What to Expect

Day 3 covers the second half of AI for Office Automation: AI + Data Analysis (uploading CSV/Excel, cleaning, insights), Building Mini-Automations (reusable templates, sales summaries, feedback categorization), Introduction to No-Code Tools (Make, Zapier, n8n), and the Capstone Workflow Lab where you will build and present a full automation scenario. Bring a real dataset or process from your work to use in the Capstone Lab.
